Neeraj Kumar

Senior Linux Platform & Infrastructure Systems Engineer | Linux Systems Engineer

Email: **neeraj.linux@talentpilot-demo.ai** | Phone: +1 (555) 831-4092 | Location: Chicago, IL (Hybrid / Remote)

PROFESSIONAL SUMMARY

Senior Linux Systems Engineer with 7+ years of deep expertise in enterprise Linux administration, kernel optimization, automated configuration management, and high-availability infrastructure. Specializing in Red Hat Enterprise Linux (RHEL 8/9), Ubuntu Server, advanced Bash automation, systemd internals, storage LVM/ZFS, and zero-downtime OS lifecycle maintenance across 1,800+ bare-metal and virtualized servers.

TECHNICAL PROFICIENCIES & CORE SKILLS

Operating Systems: Red Hat Enterprise Linux (RHEL 7/8/9), CentOS, Rocky Linux, Ubuntu Server, Debian, Oracle Linux

Scripting & Automation: Advanced Bash Scripting, Python 3, Awk, Sed, Ansible Playbooks, Puppet, Cron & Systemd Timers

Kernel & Performance Tuning: Sysctl parameter optimization, TCP/IP stack tuning, perf, sar, vmstat, iostat, strace, kdump, hugepages, cgroups v2

Storage & Filesystems: LVM (Logical Volume Management), EXT4, XFS, ZFS, RAID 1/5/10, NFS, iSCSI, Multipath I/O

Security & Hardening: SELinux policy management, CIS Level 1/2 Benchmarks, OpenSCAP, iptables/nftables, Firewalld, SSH hardening, sudoers RBAC

Clustering & High Availability: Pacemaker / Corosync HA clusters, DRBD, Keepalived, BIND DNS, DHCP, Network Bonding / Teaming

PROFESSIONAL EXPERIENCE

Senior Linux Platform Engineer | *Stratus Systems Architecture* (2021 - Present)

- Oversee fleet reliability and performance for 1,800+ RHEL and Ubuntu compute instances across hybrid cloud and on-premise blade datacenters.
- Automated unattended OS provisioning and security hardening using PXE, Kickstart, and Ansible, reducing bare-metal provisioning time from 4 hours to 18 minutes.
- Tuned Linux kernel network stack parameters (TCP socket buffers, backlog queues, SYN cookies, epoll) to support ultra-low latency transaction systems handling 45,000 req/sec.
- Investigated and resolved complex production kernel panics and out-of-memory (OOM) killer incidents through memory dump analysis using crash and kdump.
- Architected multi-node active/passive and active/active Linux HA clusters utilizing Pacemaker, Corosync, and DRBD with automated fencing (STONITH).
- Enforced SELinux enforcing mode across all production nodes and orchestrated automated CVE vulnerability remediation via Red Hat Satellite.

Linux Systems Administrator | *Quantix Infrastructure Solutions* (2017 - 2021)

- Administered enterprise storage volume expansion, filesystem migrations (EXT4 to XFS), and LVM snapshot backups for high-traffic database clusters.
- Developed automated Python and Bash maintenance daemons for log rotation, disk space reclamation, and automated system compliance audits.
- Migrated 300+ legacy CentOS 6/7 workloads to RHEL 8 with zero production downtime or customer degradation.

CERTIFICATIONS & ACCREDITATIONS

Red Hat Certified Engineer (RHCE) - RHEL 9 (Verification #180-234-901) • Red Hat Certified System Administrator (RHCSA) • Linux Professional Institute LPIC-2 Linux Engineer

EDUCATION

B.Tech in Information Technology, Delhi Technological University (2017)
