## Senior Distributed Systems Architect

Email: **abhinavclouds@gmail.com** | Phone: +1 (555) 392-8819 | Location: San Francisco, CA (Remote)

## PROFESSIONAL SUMMARY

Senior Distributed Systems Architect with 8+ years designing fault-tolerant event-driven platforms, high-concurrency microservices, and distributed storage engines. Proven track record scaling backends handling 150,000+ RPS across multi-region cloud environments with sub-15ms p99 latency.

## TECHNICAL PROFICIENCIES

**Key Skills:** Distributed Systems • Go • Python • Rust • Apache Kafka • PostgreSQL • Redis Cluster • Raft Consensus • Kubernetes • OpenTelemetry • High Concurrency • System Design

## PROFESSIONAL EXPERIENCE

### Staff Distributed Systems Architect | *CloudScale Platforms Inc.* (2022 - Present)

- Architected high-throughput financial event streaming ingestion engine processing 150k RPS using Go, Kafka, and Redis Streams with zero data loss.
- Designed zero-downtime database failover automation using Raft consensus and PostgreSQL logical replication, reducing failover RTO from 12 mins to under 1.5 seconds.
- Eliminated write amplification contention on distributed ledger tables by implementing declarative range partitioning and custom composite BRIN indexing.
- Authored distributed tracing standards across 45 microservices using OpenTelemetry and Jaeger, cutting critical incident MTTR by 52%.

### Senior Backend Systems Engineer | *Nexus Data Infrastructure* (2018 - 2022)

- Engineered distributed cache invalidation protocol handling 80,000 ops/sec across 12-node Redis Cluster.
- Migrated monolithic payment settlement services into decoupled event-driven services with Python FastAPI and gRPC.
- Led chaos engineering drills and simulated partition splits (CAP theorem verification) across multi-zone Kubernetes clusters.

## EDUCATION

B.S. in Computer Science, Carnegie Mellon University (2018)
