Abhinav Verma

Principal Data Platform & Streaming Engineer

Email: **abhinavclouds@gmail.com** | Phone: +1 (555) 833-9012 | Location: Chicago, IL (Remote)

PROFESSIONAL SUMMARY

Principal Data Engineer with 8+ years designing enterprise lakehouse platforms, real-time streaming pipelines, and analytical data layers. Proven success handling petabyte-scale event pipelines with Apache Flink, Kafka, Snowflake, and dbt.

TECHNICAL PROFICIENCIES

Key Skills: Apache Kafka • Apache Flink • Apache Spark • Python • SQL • Snowflake • dbt • Airflow • Delta Lake • Data Modeling • Streaming ETL • Data Observability

PROFESSIONAL EXPERIENCE

Principal Data Platform Architect | *Kinetix Data Systems* (2022 - Present)

- Architected unified real-time streaming data ingestion engine processing 2.4 billion daily events using Apache Flink and Kafka.
- Designed petabyte-scale Snowflake modern data warehouse and modular dbt transformation DAGs serving 500+ analytical users.
- Built automated data quality observability platform with Great Expectations, preventing corrupt pipeline ingestion before downstream impact.
- Optimized Snowflake warehouse sizing, query clustering keys, and materialized views, decreasing monthly compute costs by $45,000.

Senior Data Infrastructure Engineer | *OmniStream Analytics* (2017 - 2022)

- Built batch and streaming ETL jobs in PySpark on AWS EMR processing 50TB daily logs.
- Orchestrated complex enterprise workflow dependencies using Apache Airflow with custom sensors and SLA monitoring.
- Collaborated with ML engineering teams to build low-latency feature stores for real-time model scoring.

EDUCATION

B.S. in Information Systems, University of Illinois Urbana-Champaign (2017)
